

CALGARY PRIVATE APPOINTMENT GARAGE

# Shop-quality brakes. No shop-level overhead.

Brake pads, rotors, and oil changes are the main services. Get a vehicle-specific range before you book.

**From \$99 per axle install-only**

**standard non-German cars, your parts supplied**

Get my quote

Text vehicle details

Exact drop-off details shared after booking. An axle means front brakes or rear brakes as a pair. Final price changes by vehicle, front or rear axle, parts path, brake condition, and hardware condition. German makes are not serviced.

QUOTE  
PATH

3  
DETAILS

## Start with your car. Get a real range.

The form keeps the appointment focused and filters out German vehicles, major engine work, heavy suspension, A/C, transmission, and tire mounting requests.

Year, make, model

Front, rear, or both

I have parts

Supply parts for me

Phone number for quote range

### Vehicle-based range

Standard car

SUV

Truck

Q

### Quote first

Vehicle range before the appointment.

\$

### Price by car

Lower range for easier vehicles.

P

### Parts choice

Bring parts or choose supplied parts.

I

### Invoice proof

Clear record after every job.

## SERVICE OPTIONS

# Pick the service you need. Choose your parts path.

The main focus stays brake and oil maintenance, with a few practical add-ons by quote.

### MAIN SERVICE

## Brake pads + rotors

Front, rear, or both. Best fit for squealing, grinding, vibration, or worn brake parts.

### BEST VALUE

## Brakes + oil

One drop-off, one invoice, and the two most common maintenance jobs handled together.

### ROUTINE SERVICE

## Oil change

Correct oil and filter by vehicle. Add a free code scan when booked with another service.

### Free code scan

Included with any booked service. No scan-only appointments pushed as the main offer.

### Mounted wheel install

Tires already on rims. No tire mounting, rim swaps, or balancing.

### Limited suspension

Shocks, struts, sway bar links, and tie rods by quote. No control arms.

### RECOMMENDED

## Supply + install.

The cleanest appointment. Parts get matched to your vehicle, then installed by appointment.

- Correct pads, rotors, and hardware matched to your vehicle details
- No parts-store trip for you
- Parts and workmanship terms listed on the invoice
- Old parts shown or photographed when useful

### INSTALL-ONLY

## You bring parts. I install them.

Good when you already bought the correct parts and want a lower starting labour price.

- From \$99 per axle on standard non-German cars
- Parts verified before work starts
- No parts warranty on your supplied parts
- Wrong, missing, or poor-fit parts add time

## Low-overhead pricing that moves with the vehicle.

Your range changes by vehicle, axle, parts path, access, and hardware condition.

|                  |                        |              |
|------------------|------------------------|--------------|
| Standard car     | <div><div></div></div> | lower range  |
| SUV or crossover | <div><div></div></div> | middle range |
| Truck or van     | <div><div></div></div> | higher range |

### Why the range matters

A smaller standard car usually lands closer to the low end when parts fit and hardware cooperates. Heavier vehicles, rust, seized bolts, worn hardware, or wrong parts move the range higher. German makes are not serviced.

## WHAT TO EXPECT

# Simple from quote request to drive away.

Every appointment follows the same path, so you know what happens before the vehicle arrives.

1

### Send vehicle details

Year, make, model, service needed, symptoms, and phone number.

2

### Pick parts path

Bring your own parts or choose supply + install.

3

### Receive your range

Vehicle-based price range before booking.

4

### Approve the slot

Confirm the scope, time, and drop-off window.

5

### Deposit if needed

Applies when parts are ordered or a slot needs to be held.

6

### Drop off

Exact private-garage details sent after booking.

7

### Service gets done

Work stays within the approved scope. Updates sent when needed.

8

### Pay and drive away

Receive invoice, terms, and old-part proof when useful.

\$30/hr

### Rust, corrosion, and seized hardware.

The first 30 minutes of seized-hardware work is included. After that, extra freeing time is billed at \$30/hr until released or removed, with approval before extra time continues.

## Focused scope keeps the appointment clean.

Main services for most non-German cars, SUVs, and light trucks.

Brake pads

Rotors

Oil changes

Free code scan with service

Mounted wheels

Limited suspension

Not booked through this page.

# Real answers before you book.

Short answers to the questions drivers ask most about brakes, rotors, oil, parts, timelines, and service limits.

## What does "per axle" mean?

One axle means one pair of brakes. Front axle means both front wheels. Rear axle means both rear wheels.

## How do I get a firm quote?

Send year, make, model, engine size if known, front/rear/both, symptoms, and whether you have parts or need parts supplied.

## What brake signs matter?

Squealing, grinding, vibration, pulling, soft pedal, longer stopping, or a brake warning light should be checked.

## Do both sides get replaced together?

Yes. Brake work is quoted by axle. Left and right sides on the same axle stay matched for even braking.

## Do you accept my own parts?

Yes. Your parts get checked before work starts. Customer-supplied parts have no parts warranty and limited workmanship coverage.

## Is there warranty?

Supply + install includes clearer parts and labour coverage. Customer-supplied parts do not include parts warranty.

## Do you scan check-engine codes?

Yes. A basic code scan is free when booked with another service. Deep electrical tracing and scan-only visits are not the main offer.

## What suspension work is available?

Limited jobs by quote: shocks, struts, sway bar end links, and tie rods. No control arms or hard-access suspension.

## What if a bolt is seized?

The first 30 minutes is included. Extra freeing time after that is billed at \$30/hr until released or removed, with approval first.

## What does "from \$99 per axle" include?

Starting install-only labour for standard non-German cars when you supply correct pads, rotors, hardware, and sensors if needed.

## Why does price change by car?

Parts cost, rotor size, front or rear axle, brake condition, oil capacity, access, rust, and hardware condition affect price.

## Do I need pads only or rotors too?

It depends on rotor condition. Grinding, vibration, deep grooves, rust, or thin rotors usually move the job toward pads plus rotors.

## How long does brake service take?

Most clean brake jobs are planned by axle. Rust, wrong parts, seized hardware, or added work increases appointment time.

## What happens if my parts are wrong?

The appointment pauses. Wrong, missing, defective, poor-fit, or incomplete parts add labour time or require rescheduling.

## What oil options do you offer?

Oil and filter are selected by vehicle. Pricing changes by oil type, oil capacity, filter, skid plates, and access.

## Do you install tires or wheels?

Mounted wheel installs only. Tires must already be on rims. No tire mounting, rim swaps, balancing, or alignments.

## What work is not booked?

No German cars, control arms, major engine repairs, transmission, A/C, no-start repairs, tire mounting, balancing, or alignments.

## Where do I drop off?

Exact private-garage drop-off details are shared after the appointment is confirmed, so each booking stays controlled.

## Need brakes, oil, or a simple add-on?

Send your vehicle details. Get the range before booking. Keep the appointment focused on the work you came for.
